

CLADDING FIXING
SYSTEM WG 40

WG 40

CLADDING FIXING SYSTEMS

- WELLBOND can be successfully applied as a decorative material for walls ,ceilings and column claddings whether for exterior or interior uses .
wellbond systems based on a rain screen principal with provision for natural ventilation of the space between the cladding panels and the wall .
- Due to outstanding rigidity ,wide colour and gloss range .wash easiness and high resistance against moisture,salts,acids and cleaning detergents wellbond is the perfect material for premises of different types; wellbond is an absolutely ecologically safe material and can be used for residential premises of all types without exception .
- In the guide we will describe only several of the popular techniques .to achieve perfect cladding with smooth surface and right angles it is necessary to compensate wall defects and tolerances . for this purposes we recommend to use fixing system.
- Making the frame with aluminum profiles can guarantee easier installation and much more long lasting life of the whole system .

FIXING :

Fasteners , including concealed screw , nuts, bolts and other items required for connecting aluminum to aluminum or aluminum to steel are to be of galvanized steel or non-magnetic stainless steel .

Blind rivets used for fastening WELLBOND panels to aluminum sub frame , are to be of aluminum alloy.

All fixing anchors, brackets and similar attachments used in the fixation are to be made from aluminum , non-magnetic stainless steel ,zinc coated steel or hot dip zinc galvanized steel .

If the reinforcement of the panel is required , an extruded aluminum profile of suitable cross-section and strength will be bonded to the reverse side of the WELLBOND panels using double sided adhesive tape «3M» . application of bonding systems are to be in strict conformity with the manufacturer`s specification .

the ends of the stiffener are mechanically joined to the panel sub frame .

Each panel is marked on the reverse side for easy identification of size and location on request .

Finished panels are stored and transported to site in vertical position , face - to - face respectively , back - to - back , with adequate protection to prevent scratches and dents .

The factory applied protective peel - off tape shall only be removed after the panels have been installed on site .

EXTERIOR INSTALLATION

- Panels are to be stored on site in vertical position , face - to -face respectively back -to-back ,with adequate protection to prevent scratches and dents .
- Any component parts, which are observed to be defective in any way,including warped,bowed,dented, and broken member,must not be installed . members or parts,which have been damaged during installation before or after the time of final acceptance are removed and replaced .
- No cutting , trimming , welding or brazing of component parts during fixation in any manner which would damage the finish , decrease the strength or result in visual imperfection or failure in performance are executed during fixation . component parts,which require replacement , will be returned to shop for fabrication , if necessary replaced with new parts .
- Anchorage of the cladding structure to the building structure shall be by approved methods in strict accordance to the specification and approved shop and fixation drawing . supporting brackets are so designed as to provide three - dimensional adjustments and accurate location of cladding components .
- All components parts are installed level, true to line with uniform joints and reveals .
- Maximum deviation for vertical member : 3 mm max .in a 6 m run and 5mm max.in a 12m run.
- Maximum deviation for horizontal members : 3mm max in an 12 m run
- Maximum offset from true alignment between the abutting members shall not exceed 1.0mm
- The tolerance of the width of the joints between two panels in maximum + 2mm.
- Cladding panels are to be left protected by the factory applied peel -off tape as long as possible . under no cricumstances the peel off tape on individual panels is to be partially removed and left exposed to weathering
- Before handing over of the completed cladding all peel off tape will be removed.

WG4046

WG4047

WG4048

- ALL ALUMINUM PROFILES FOR EXTERIOR FIXING SYSTEMS ARE PRODUCED OF ALUMINUM ALLOY 6063T6.
- STANDARD LENGTH IS 6 M .
- OTHER LENGTHS CAN BE ALSO PRODUCED FOR SPECIAL REQUESTS .

PROFILE INDEX

WG 4046 BOX TYPE RUNNER PROFILE

WG 4048 CLIP-IN PROFILE

WG 4047 BOX TYPE RUNNER PROFILE

1. VERTICAL JOINT
2. HORIZONTAL JOINT
3. WINDOW HEAD/SILL
4. WINDOW SIDE
5. PARAPET RETURN
6. CORNER SEGMENT / INNER CORNER
7. CORNER SEGMENT / OUTER CORNER
8. LOWER CLADDING DETAIL

DESCRIPTION : VERTICAL JOINT SECTION (1)

1. WELLBOND ALUMINUM COMPOSITE PANEL
2. ALUMINUM PROFILE WG 4048
3. ALUMINUM PROFILE WG 4047 / 4046
4. ALUMINUM U-SECTION
5. WELLBOND WALL BRACKET
6. ROCK WOOL INSULATION
7. ANCHOR BOLT
8. BOLT AND NUT
9. WALL

DESCRIPTION : HORIZONTAL JOINT SECTION (2)

1. WELLBOND ALUMINUM COMPOSITE PANEL
2. ALUMINUM PROFILE WG 4048
3. ALUMINUM PROFILE WG 4047
4. WELLBOND WALL BRACKET
5. ROCK WOOL INSULATION
